

Progress of Update #4 of the NPL

Region V submitted 19 HRS packages for this update. After the MITRE review was completed 14 had been QA'd and signed off by MITRE. In the 19 packages were 4 resubmittals from previous updates, 2 of these have been QA'd.

There were five sites which were dropped. They are:

- (Sauget)
- 1) Cahokia/Dead Creek - This was dropped because during the review it was determined that the waste quantity was calculated on the contaminated soil. This calculation was not allowable. MITRE felt that the rest of the waste was insufficient to support the target. Once again there was a problem in regards to the air data. MITRE wanted to see where the samples were taken and when. We are still unable to present MITRE with the proper documents. This was the same reason the site was not QA'd in the last update. The State submitted the "St. John" report hoping this would answer the questions on air monitoring.
 - 2) By Products Management - This was dropped after FIT and MITRE discussed the package. The problem was that the population used extended beyond the 3 mile radius. The wells counted were also beyond the radius.
 - 3) Dover Chemical - This is also a resubmission from previous update. This site was dropped after discussion with the State. The State used a confidential report as a reference. We have been in the process of having Regional Counsel obtain permission to use the report. It will take about 3 weeks or more. Hopefully by update #5 we will have an answer.

- 4) Ashland Oil/Cottage Grove - After discussing this site with Dave Richfield of MPCA, it was decided to withdraw the package. The documentation needed to complete the review was not readily available. There was a lack of information regarding the relationship between the shallow aquifer and the Prairie du Chien.
- 5) East Bethel Demolition Landfil - We were informed by MITRE on 4/30/85, that East Bethel Demolition Landfill would not be included in this update. MPCA was to supply MITRE with additional documentaion on the premeability and on the waste quantity. MPCA was to include and analysis prepared by Howe Chemical to support the waste quantity. If additional work is done, MITRE feels that this package may make a future update.

NATIONAL NUMBERS OF THE 4/30/85

REGION	#SUBMITTED	#QA'd	POSSIBLES
1	1		1
2	5	2	
3	8	6	
4	7	3	
5	19	14	
6	2	1
